

" SMAK "

Product Type:

Degreasing solvent for metals
SCTECNSMA/001 Rev.0

Product Category:

SOLVENTS - Professional Use Only

Description:

The formulation stems from the demand for a non-water based degreaser for cleaning aluminium parts and surfaces on flanges, which then need to be treated with a pickling product (Temporiti DEK). The mixture of solvents in Temporiti SMAK breaks down and loosens the oily dirt and grease covering any metal parts. It evaporates them quickly and completely so that the part is immediately ready for the next treatment. Its components have been selected and combined for their extraordinary ability to be tough on dirt yet gentler on plastics, which makes Temporiti SMAK the ideal general cleaning product for the textile machinery and metalworking industries. Temporiti SMAK is the perfect product for preparing surfaces that need to be treated with Temporiti DEK.

Instructions:

Dampen a cloth and pass it evenly over the surfaces of the flanges whilst the beam is rotating. Then use a dry, clean cloth to wipe the surfaces until they are completely clean.

Recommended use:

Temporiti SMAK is used to degrease mechanical parts during routine cleaning. It can also be used to eliminate oil and grease before painting. It is particularly suitable for use in:

- Textile and metalworking businesses.
- Maintenance departments.
- Painting plants.
- Industrial structural steelwork.

FOR PROFESSIONAL USE ONLY.

The company declines any and all responsibility for improper use of the product.
